EXPERIENCE

**Full Stack Developer • Capgemini**  
Mar 2024 → June 2024 Murcia, España (Hybrid)

- Worked on a project at Capgemini to manage ADCenter projects, centralizing information on active projects.
- The system facilitated team and vacancy management, attracting new members to projects.
- Designed to be highly scalable, supporting numerous simultaneous users.
- Faced complex tasks requiring research and dedication to resolve.
- Learned to handle technical and organizational issues by researching and applying effective solutions.
- Experienced in Java programming with Spring Boot, JOOQ, JDBC, Keycloak for authentication/authorization, CQRS patterns, RabbitMQ for messaging, client-side web development (React TypeScript, Redux), and Agile methodology (SCRUM).
- This process allowed me to grow professionally, learning from mistakes and continuously improving my skills.

**Full Stack Developer • BIUWER**  
Ago 2024 → Present Murcia, España

- Improved application performance by 15% through Redis optimization and TTL configuration, significantly reducing response times in high-demand environments.
- Led the development of key product features end-to-end, including technical design, implementation, automated testing, and documentation.
- Designed custom solutions for clients, from database architecture to Figma-based visual interfaces, with clear documentation for developers and stakeholders.
- Oversaw the full development of reusable components, aligning technical and visual standards across backend and frontend to ensure scalability and maintainability.

PROJECTS

**Portfolio • AlberrDev**  
Feb 2024 → Mar 2024 Murcia, Spain
